Claim Amendments

What is claimed is:

1. (currently amended): A copy holder to display copy to ~~the~~ a user of a notebook computer, having an outer case ~~said computer having a flat display screen housed in a case having an outer shell casing~~, ~~said copy holder~~ comprising:
 - an upper horizontal channel affixed to ~~said shell casing~~ the outer case,
 - a lower horizontal channel affixed to ~~said shell casing~~ the outer case, parallel to said upper horizontal channel,
 - a first quadrature flat panel slidably disposed between said upper and lower channels for movement between a stored position lying against and within the boundary of said outer case and a use position outboard of said outer case where ~~said first panel can~~, ~~said panel having means for retaining copy material thereon~~,
 - whereby said first panel may be extended to the side of said case to retain and display copy materials to the computer user.
2. (currently amended): A copy holder as in claim 1 wherein said first quadrature panel has a parallel top and bottom edges which cooperate slidably with said upper and lower channels, respectively.
3. (original): A copy holder as in claim 2, further including rigid linear tubular members affixed to said top and bottom edges.
4. (original): A copy holder as in claim 3, wherein said tubular members have rectangular cross-sections.

5. (currently amended): A copy holder as in claim 1, further comprising a second quadrature flat panel nested on and slidably cooperative with said first

~~quadrate flat~~ panel, whereby said second panel may be telescoped apart from said first panel to expand the width of said copy holder.

6. (currently amended): A copy holder as in claim 2, further comprising means associated with said first ~~quadrate flat~~ panel for retaining sheets of copy material thereon.

7. (currently amended): A copy holder as in claim 6, wherein said retaining means includes a flap affixed adjacent to the bottom edge of said first ~~quadrate flat~~ panel.

8. (original): A copy holder as in claim 7, wherein said retaining flap includes interior horizontal ridges.

9. (original): A copy holder as in claim 6, wherein said retaining means comprises a plurality of stiff wire members, each having a first end and a second end, with said first end rotatably affixed to said panel adjacent a corner of said panel and said second end adapted to grip sheets of copy material thereon.

10. (original): A copy holder as in claim 6, wherein said retaining means may be rotated to a substantially vertical position to extend the support surface of the copy holder.

11. (original): A copy holder as in claim 3, wherein said tubular members include hinges to allow said panel to rotate about a vertical axis whereby said copy holder may be rotated toward a computer user.

12. (new): A copy holder as in claim 1, wherein the copy holder is affixed to the exterior of a lid of a notebook computer.

13. (new) A copy holder for use with and attachment to an outer surface of a notebook computer lid comprising;

a pair of spaced apart slide supports affixed to the outer surface of the computer lid;

at least one panel secured to and between upper and lower support members, said upper and lower support members being slidably retained by said pair of spaced apart slide supports so that the upper and lower supports can be moved relative to said lid to permit said at least one panel to be moved between a nested position within the confines of said cover and a use position extended outwardly beyond a side edge of the lid to permit copy to be held on said at least one panel for viewing.

14. (new) A copy holder comprised of a pair of slide supports, at least one panel secured to and between upper and lower support members, said upper and lower support members being slidably retained by said pair of spaced apart slide supports so that the upper and lower supports can be moved relative to said pair of slide supports, and means for affixing the pair of slide supports to a surface.
